YC and data

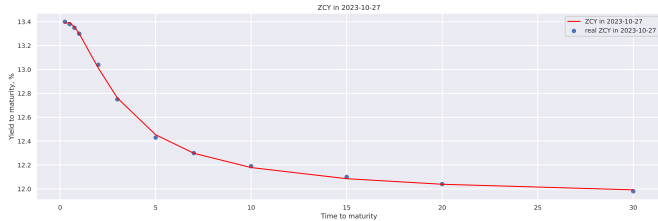

Figure: Yield Curve

$$G(T) = \beta_0 + (\beta_1 + \beta_2)\frac{\tau}{T}\left(1 - e^{-\frac{T}{\tau}}\right) - \beta_2 e^{-\frac{T}{\tau}}, \tag{1}$$

where T is the time to maturity, $G(T)$ is the yield estimator, and the parameters to be estimated are: β_0 is the long-run of zero-bond yields, β_1 is the mid-run of zero-bond yields, β_2 is the short-run of zero-bond yields.

Structural breaks in factor dynamics

Structural breaks in factor dynamics

1. 2005: The complete stabilization of the Russian economy, the war in Iraq.
2. 2008: the Russo-Georgian Conflict and the beginning of the world finanical crisis.
3. 2018: protests from March 2017 to the end of 2018. Also, there was a 2018 FIFA World Cup.
4. 2020: COVID-19 pandemic.
5. 2022: special military operation.
